

RSS Website Builder

User Guide

Table of contents:

1. Introduction

2. Installation Steps

1 INTRODUCTION

RSS Website Builder is so powerful, you can build any website in seconds. But the lightning fast speed of RSS Website Builder is only the beginning of all the benefits.

Unlike other site-generating software, RSS Website Builder is extremely quick and easy to set up - it even comes with an automatic installer that configures everything for you.

Based on your keyword list, RSS Website Builder can automatically determine the theme of your website - eliminating the need to sort through all your keyword files.

The “smart” template-driven system allows you to easily customize your pages for each of the websites you build - making certain all your websites are unique.

Everything about RSS Website Builder spells time-saver. And, it wipes out telltale fingerprints that are capable of “sabotaging” sites built with any of those inferior generating systems.

Please follow the instructions for installation and usage.

2 INSTALLATION STEPS

In order to begin installing RSS Website Builder, you will need to modify a few files.

2.1 Modifying Config.php

Using your HTML editor open config.php

You will need to modify line 4 to contain your Google AdSense pub-id number.

The default code looks like this:

```
$GooPubId="";
```

You will need to add your actual Google AdSense pub-id number between the quotation marks (") as shown below:

```
$GooPubId="pub-0000000000000000";
```

2.2 Modifying keywords.txt

Using Notepad open keywords.txt

By default there are a few keywords in the file. You will need to remove these keyword and add/copy/paste your keywords into this file.

NOTE: The keyword list must be in one per line format like this:

```
Keyword1  
Keyword2  
Keyword3  
Etc.
```

2.3 Modifying the template

You can easily make the templates match the look and feel of any site.

You will need to make sure that you do not alter the PHP include tags. They look like this:

```
<?php echo $site; ?>
```

When modifying the template you may also enter a specific Google AdSense channel. In the AdSense script look for this line:

```
google_ad_channel = "";
```

Enter your specified channel number between the quotes (“”).

2.4 Uploading the script to your site

Using your FTP client upload all the files included in this script to your site.

NOTE: RSS Website Builder can be used to build an entire site. Or it can be used to create additional pages for an existing site.

To use RSS Website Builder to build an entire site you will need to upload the files to your web server's main directory (usually public_html). You will also need to make sure the folders permissions have been set to 777.

To use RSS Website Builder to add additional pages to an existing site you will need to create a subfolder and upload the files in there (eg. public_html/rsswb). Make sure that the subfolders permissions have been set to 777.

After you have completed the installation and the pages have been generated, change permissions to 755.

2.5 Additional notes before installing

RSS Website Builder examines your entire keyword list and uses the word that appears most often as the site theme. This word will appear in the HTML title tag and also in the body of each generated page.

If you prefer to set the theme of your site manually, rather than let the program make the determination; you can do so with a simple change in the configuration file.

It is on line 14 and looks like this:

```
$mainkeyword = "";
```

You will need to insert your primary keyword between the quotes like this:

```
$mainkeyword = "Marketing";
```

2.6 The installer

Run the installer by going to:

<http://www.yourdomain.com/install.php>

Or if you install it to a subfolder:

<http://www.yourdomain.com/foldername/install.php>

Now the script will install itself and build all the pages for you. When complete, you will be redirected to the confirmation page automatically. From there you can view all of your generated pages.

NOTE: If you installed the script in a subfolder you will need to make sure that you add a link to the newly created index page on your homepage.

I hope you enjoy RSS Website Builder!
